

Group C : Project Document Outline:

Project team members:

- Eesh
- Simran
- Isabel
- Nyabijek
- Quinn

Summarized project background & business need/opportunity:

Our project's main objective is to raise awareness and involvement in the Sustainable Development Goals (SDGs) in Regina, Saskatchewan. We plan to achieve this by creating a comprehensive website that educates the local community about the most pressing issues that require change. This website will also serve as a resource for potential residents evaluating the city. Additionally, we aim to develop a specific component that will focus on SDG mapping for Regina. This component will target officials and professionals capable of using the data for actionable change. At the same time, it will provide the general public with insights into community progress, volunteer opportunities, and resources for active involvement in achieving these goals.

Northstar: Government Officials/Professionals

Carryover customers: Individuals working with data (engineers, etc), non-profit organizations, educators, potential volunteers, environmentalists, professionals, immigrants, potential residents

Project assumptions:

- WordPress will be used as the platform.
- The project is Regina-based.
- No budget is allocated.
- Data is downloadable, fairly accurate, and recent.
- The project will address a wide range of SDGs.
- Focus on the main six SDGs for Regina.
- The website will allow access to data and graphs.
- The website will be self-functioning and won't require constant maintenance.
- Expectations are that the website won't be perfect due to the team's learning process.

Project constraints:

- Required to use WordPress as the platform.
- Limited to reported data.
- No budget available.
- Regina cannot address all SDGs simultaneously.
- Cross-platform functionality may not be as smooth.
- Limited experience with web development tools provided
- Limited timeframe to complete the project
- Ensuring the website meets the needs and expectations
