Lo-Fidelity - People Centered Design:

Affordances: My Lo-Fi design focuses on simplicity which emphasizes clear and intuitive affordances. It utilizes simple, organized design with minimalistic icons and items (texts) to guide users through the interface, using affordance to clearly show clickable elements and inactivity.

Constraints: My Lo-Fi design also incorporates constraints to guide user behavior and prevent misuses. It uses simple step-to-step guidance and familiar elements to navigate complex processes to prevent overwhelming users and help digest displayed data.

Gestalt Principles: This Lo-Fi design emphasizes visual hierarchy to give importance to information and guide user attention. The Gestalt principles such as proximity and similarity are used to create distinct and visually appealing layouts/elements. The clear distinction between size, text format and placement helped establish the hierarchy, to captivate and quickly help the user to digest information.
